their small size. They are hardy. They breed in massive numbers. They spread rapidly.

Zebra Mussels' Takeover of the Great Lakes | Discover Magazine

A zebra mussel has something of a “foot” that enables it to drag itself across a lake bottom, but even the fastest adult zebra mussel can only trundle along at maybe 14 inches per hour. A pioneering colony of the mussels also could not have inched its way, generation by generation, across the ocean and up the Seaway because the mussels would not have survived the ocean’s salinity or depth.

Are zebra mussels really invading? - The Biology Corner

Zebra mussels are one of the most insidious and invasive forms of mussels that have managed to invade all of North America, to the point that the local mussels are going extinct. These mussels are native to northern Europe but somehow they were introduced to the Great Lakes in 1988 and since then, they have spread to most of the large freshwater bodies located in North America.
