Almost a third of global population lacks physical or economic access to safe drinking water and two thirds lack access to safe sanitation. Untreated water together with lacks infrastructure results in water-born disease. Access to water is compromised particularly in conflict areas, but water can also contribute to conflict as 62 countries share bodies of water. This challenge therefore

Food chemistry is the study of chemical processes and interactions of all biological and non-biological components of foods. The biological substances include such items as meat, poultry, lettuce, beer, milk as examples. It is similar to biochemistry in its main components such as carbohydrates, lipids, and protein, but it also includes areas such as water, vitamins, minerals, enzymes, food

Scattered literature is harnessed to critically review the possible sources, chemistry, potential biohazards and best available remedial strategies for a number of heavy metals (lead, chromium, arsenic, zinc, cadmium, copper, mercury and nickel) commonly found in contaminated soils. The principles, advantages and disadvantages of immobilization, soil washing and phytoremediation techniques

1. Introduction. Gelatin is a soluble protein compound obtained by partial hydrolysis of collagen, the main fibrous protein constituent in bones, cartilages and skins; therefore, the source, age of the animal, and type of collagen, are all intrinsic factors influencing the properties of the gelatins (Johnston-Banks, 1990). Although to date, up to 27 different types of

There is even an excellent, though brief, section on physical organic chemistry, and several excellent chapters on spectroscopic techniques, some quite advanced. With this approach and these tools, the student feels like organic chemistry is something that generations of scientists deduced, rather than a monolithic set of facts that came to us in its current form. 2) In contrast to nearly all
