The standard example is the reduction of thermodynamics to statistical mechanics. Nagel thought that from the laws of statistical mechanics one can derive the laws of thermodynamics (deducibility), with the help of "bridge principles" that connect the terms of these two theories (connectability; Nagel 1961: ch. 11; Schaffner 1967). Nagel's original approach to reduction has been

Biochemistry or biological chemistry, is the study of chemical processes within and relating to living organisms. A sub-discipline of both chemistry and biology, biochemistry may be divided into three fields: structural biology, enzymology and metabolism. Over the last decades of the 20th century, biochemistry has become successful at explaining living processes through these three disciplines.

A rubber band (also known as an elastic band, gum band or lucky band) is a loop of rubber, usually ring or oval shaped, and commonly used to hold multiple objects together. The rubber band was patented in England on March 17, 1845 by Stephen Perry. Most rubber bands are manufactured out of natural rubber or, especially at larger sizes, elastomer, and are sold in a variety of sizes.

1: A balanced three-phase, three-wire star-connected load is connected to a three-phase supply. The line voltage is 400 V. The load comprises an impedance of  $100 + j100 \Omega$  per phase. Set these parameters and select the suitable circuit to determine the total active, reactive, and apparent power by using the VI provided.
